

Production Prototyping

Tom Bartindale, Jun 2012

Whilst at Microsoft Research Cambridge I worked with the team that develop .NET Gadgeteer, Microsoft's new rapid hardware prototyping platform.

Using Gadgeteer, I developed DMX and MIDI production modules, enabling rapid prototyping of performance and production technology.

Prototypes were tested in a day-long workshop organised in a local theater.

Find out more about Gadgeteer at <http://research.microsoft.com/en-us/projects/gadgeteer/>
